INDEX TO AUTHORS

A

Ackermann, W. W. Concerning the relation of the Krebs cycle to virus propagation, 421

Ajl, Samuel J., and **Kamen, Martin D.** Studies on the mechanism of acetate oxidation by *Escherichia coli*, 845

—, —, **Ranson, Stanley L.,** and **Wong, Donald T. O.** Studies on the mechanism of acetate oxidation by *Micrococcus lysodeikticus*, 859

Altgelt, Sarah. See *Beerstecher and Altgelt*, 31

Anfinsen, Christian B., and **Steinberg, Daniel.** Studies on the biosynthesis of ovalbumin, 739

Armstrong, Marvin D., and **Lewis, Joy D.** Growth experiments with thioether derivatives of cysteine and homocysteine, 461

B

Baer, Erich. Synthesis of enantiomeric α-phosphatidic acids, 235

Balis, M. Earl. See *Marrian, Spicer, Balis, and Brown*, 533

Ball, Eric G. See *Crane and Ball*, 269

Balls, A. K. See *Jansen, Curl, and Balls*, 671

Beerstecher, Ernest, Jr., and **Altgelt, Sarah.** Apoerythein in saliva, 31

Bergeim, Olaf. See *Solomon, Johnson, Sheffner, and Bergeim*, 629

Birmingham, Marion K., and **Elliott, K. A. C.** Effects of pH, bicarbonate, and cofactors on the metabolism of brain suspensions, 73

Bischoff, Fritz, Yee, Yee Sing, Moran, John J., and **Katherman, Robert E.** Enzymatic hydrolysis of steroid hormone esters by blood serum, 729

Bloch, Konrad. See *Ottke, Tatum, Zabin, and Bloch*, 429

Bloom, B., Chaikoff, I. L., Reinhardt, W. O., and **Dauben, W. G.** Participation of phospholipides in lymphatic transport of absorbed fatty acids, 261

Bourdillon, Jaques. A crystalline bean seed protein in combination with phytic acid, 65

Brady, Roscoe O., and **Gurin, Samuel.** The synthesis of radioactive cholesterol and fatty acids *in vitro*, 371

de Braganza, B. See *Korey, de Braganza, and Nachmansohn*, 705

Brown, Albert E. See *Teague and Brown*, 343

Brown, George Bosworth. See *Marrian, Spicer, Balis, and Brown*, 533

Bryson, Melvin J. See *Reiser and Bryson*, 87

C

Campbell, James, and **Davidson, I. W. F.** Anterior pituitary extract and liver metabolism, 35

Cantoni, G. L. Activation of methionine for transmethylation, 745

—. Methylation of nicotinamide with a soluble enzyme system from rat liver, 203

Caputto, Ranwel. The enzymatic synthesis of adenylic acid; adenosinekinase, 801

Cerecedo, Leopold R., Soodak, Morris, and **Eusebi, Albert J.** Studies on thiamine analogues. I. Experiments *in vivo*, 293

Chaikoff, I. L. See *Bloom, Chaikoff, Reinhardt, and Dauben*, 261

Chantrenne, Hubert. The requirement for coenzyme A in the enzymatic synthesis of hippuric acid, 227

Clark, I., and **Rittenberg, D.** Evidence on the metabolism of α-acetyllysine, 529

— and —. The metabolic activity of the α-hydrogen atom of lysine, 521

Cohen, Seymour S. Gluconokinase and the oxidative path of glucose-6-phosphate utilization, 617

—. See *Lanning and Cohen*, 109

Cooperstein, S. J., and **Lazarow, Arnold.** A microspectrophotometric method for the determination of cytochrome oxidase, 665

Copp, D. Harold. See *Jones and Copp*, 509
Crandall, Dana I. See *Ravdin and Crandall*, 137
Crane, Robert K., and **Ball, Eric G.** Relationship of $C^{14}O_2$ fixation to carbohydrate metabolism in retina, 269
Curl, A. Laurence. See *Jansen, Curl, and Balls*, 671

D

Dauben, W. G. See *Bloom, Chaikoff, Reinhardt, and Dauben*, 261
Davidson, I. W. F. See *Campbell and Davidson*, 35
Davis, David, Henderson, L. M., and **Powell, Dwight.** The niacin-tryptophan relationship in the metabolism of *Xanthomonas pruni*, 543
Davis, Paul L. See *Kies and Davis*, 637
Dawson, Charles R. See *Dunn and Dawson*, 485
Day, Paul L. See *Dinning, Keith, and Day*, 515
Delwiche, C. C. The assimilation of ammonium and nitrate ions by tobacco plants, 167
—. See *Meneghini and Delwiche*, 177
DeRose, A. F. See *Philip, Saunders, DeRose, MacCorquodale, Sylvester, and Weston*, 479
Deutsch, H. F. See *Marshall and Deutsch*, 1
Di Carlo, Frederick J., Schultz, Alfred S., and **McManus, Doris K.** The assimilation of nucleic acid derivatives and related compounds by yeasts, 151
Dinning, James S., Keith, Cecilia K., and **Day, Paul L.** The influence of folic acid on methionine metabolism, 515
Doherty, David G., and **Popenoe, Edwin A., Jr.** The resolution of amino acids by asymmetric enzymatic synthesis, 447
Dorfman, Ralph I. See *Ungar, Dorfman, and Prins*, 11
Dunn, Frank J., and **Dawson, Charles R.** On the nature of ascorbic acid oxidase, 485
Dziewiatkowski, Dominic D. Effect of thyroxine and thiouracil on S^{35} deposition in articular cartilage, 717
—. Isolation of chondroitin sulfate-S^{35} from articular cartilage of rats, 187

E

Ehrensvärd, G., Reio, L., Saluste, E., and **Stjernholm, R.** Acetic acid metabolism in *Torulopsis utilis*. III. Metabolic connection between acetic acid and various amino acids, 93
Elliott, K. A. C. See *Birmingham and Elliott*, 73
Elvehjem, C. A. See *Feigelson, Williams, and Elvehjem*, 361
—. See *Klungsøyr, Sirny, and Elvehjem*, 557
—. See *Williams, Feigelson, Shahinian, and Elvehjem*, 659
Englard, Sasha, Sorof, Sam, and **Singer, Thomas P.** Intramolecular nature of the oxidative inactivation of crystalline β-amylase, 217
Eusebi, Albert J. See *Cerecedo, Soodak, and Eusebi*, 293
Ezmirlian, Florita. See *MacDonald, Ezmirlian, Spain, and McArthur*, 387

F

Feigelson, Philip, Williams, J. N., Jr., and **Elvehjem, C. A.** Inhibition of diphosphopyridine nucleotide-requiring enzymes by nicotinamide, 361
—. See *Williams, Feigelson, Shahinian, and Elvehjem*, 659
Ferguson, Colin C. See *Rosenthal, Rogers, Vars, and Ferguson*, 831
Frisell, W. R. See *Weinbach, Lowe, Frisell, and Hellerman*, 779
Frost, Douglas V., and **Sandy, Harry R.** Utilization of non-specific nitrogen sources by the adult protein-depleted rat, 249

G

Gerald, P. S., and **Kagan, B. M.** A method for the determination of gentisic acid in serum, 467

Graf, L. H. See *Stahmann, Graf, Patterson, Walker, and Watson,* 45
Gurin, Samuel. See *Brady and Gurin,* 371
Gutmann, Helmut R., and **Wood, John L.** A note on the acetylation of sulfur amino acids by liver and kidney, 473

H

Handler, Philip. See *Leder and Handler,* 889
Handschumacher, R. E., Mueller, Gerald C., and Strong, F. M. An improved enzymatic assay for coenzyme A, 335
Hastings, A. Baird. See *Mueller and Hastings,* 869, 881
Haugaard, Niels, Marsh, Julian B., and Stadie, William C. Phosphate metabolism of the isolated rat diaphragm, 59
—. See *Stadie, Haugaard, and Marsh,* 53
Hellerman, Leslie. See *Weinbach, Lowe, Frisell, and Hellerman,* 779
Henderson, L. M., Weinstock, I. M., and Ramasarma, G. B. Effect of deficiency of B vitamins on the metabolism of tryptophan by the rat, 19
—. See *Davis, Henderson, and Powell,* 543
Hill, C. H., and Scott, M. L. Studies on the rôle of cysteine in the activation of folic acid conjugase, 651

J

Jansen, Eugene F., Curl, A. Laurence; and Balls, A. K. A crystalline, active oxidation product of α-chymotrypsin, 671
Johnson, Clarence A. See *Solomon, Johnson, Sheffner, and Bergeim,* 629
Jones, D. C., and Copp, D. Harold. The metabolism of radioactive strontium in adult, young, and rachitic rats, 509

K

Kagan, B. M. See *Gerald and Kagan,* 467
Kamen, Martin D. See *Ajl and Kamen,* 845
—. See *Ajl, Kamen, Ranson, and Wong,* 859
Katherman, Robert E. See *Bischoff, Yee, Moran, and Katherman,* 729
Keith, Cecilia K. See *Dinning, Keith, and Day,* 515
Khalil, Fouad. Excretion in reptiles. IV. Nitrogenous constituents of the excreta of lizards, 443
Kies, Marian W., and Davis, Paul L. A new procedure for fractionation of mixtures by solvent distribution, 637
King, Tsoo E., Neal, A. L., and Strong, F. M. Synthesis of pantolactone phosphate and its effect on growth of microorganisms, 307
— and **Strong, F. M.** Some properties of coenzyme A, 325
— and —. Synthesis and properties of pantothenic acid diphosphate, 315
Kleinschmidt, Elaine. See *Ackermann,* 421
Klioze, Oscar. See *Melchior, Klioze, and Klotz,* 411
Klotz, Irving M. See *Melchior, Klioze, and Klotz,* 411
Klungsøyr, M., Sirny, R. J., and Elvehjem, C. A. Effect of incomplete hydrolysis on microbiological determination of amino acids, 557
Korey, Saul R., de Braganza, B., and Nachmansohn, David. Choline acetylase. V. Esterifications and transacetylations, 705
Kornberg, Arthur, and **Pricer, W. E., Jr.** Di- and triphosphopyridine nucleotide isocitric dehydrogenases in yeast, 123
Kunkel, H. O., and **Williams, J. N., Jr.** The effects of fat deficiency upon enzyme activity in the rat, 755

L

Lanning, Mary C., and **Cohen, Seymour S.** The detection and estimation of 2-ketohexonic acids, 109
Lazarow, Arnold. See *Cooperstein and Lazarow,* 665

Leder, Irwin G., and **Handler, Philip.** Synthesis of nicotinamide mononucleotide by human erythrocytes *in vitro*, 889

Lewis, Joy D. See *Armstrong and Lewis*, 461

Lorber, Victor. See *Siegel and Lorber*, 571

Lowe, H. J. See *Weinbach, Lowe, Frisell, and Hellerman*, 779

Luebering, J. See *Rapoport and Luebering*, 683

Lytle, V. L., Zulick, S. M., and **O'Kane, D. J.** Replacement of the pyruvate oxidation factor by carbon dioxide, 551

M

MacCorquodale, D. W. See *Philip, Saunders, DeRose, MacCorquodale, Sylvester, and Weston*, 479

MacDonald, Norman S., Ezmirlian, Florita, Spain, Patricia, and **McArthur, Clare.** The ultimate site of skeletal deposition of strontium and lead, 387

MacVicar, Robert. See *Tigerman and MacVicar*, 793

Magasanik, Boris. See *Umbarger and Magasanik*, 287

Marrian, Denis H., Spicer, Virginia L., Balis, M. Earl, and **Brown, George Bosworth.** Purine incorporation into pentose nucleotides of the rat, 533

Marsh, Julian B. See *Haugaard, Marsh, and Stadie*, 59

—. See *Stadie, Haugaard, and Marsh*, 53

Marshak, Alfred, and **Vogel, Henry J.** Microdetermination of purines and pyrimidines in biological materials, 597

—. Purine and pyrimidine content of the nucleic acids of nuclei and cytoplasm, 607

Marshall, Margaret E., and **Deutsch, H. F.** Distribution of egg white proteins in chicken blood serum and egg yolk, 1

Mathews, Martin B. The oxidation of reduced diphosphopyridine nucleotide in green peas, 695

McArthur, Clare. See *MacDonald, Ezmirlian, Spain, and McArthur*, 387

McManus, Doris K. See *Di Carlo, Schultz, and McManus*, 151

Meister, Alton, Sober, Herbert A., and **Tice, Sarah V.** Determination of aspartic and glutamic acids by enzymatic decarboxylation, 591

—, —, and —. Enzymatic decarboxylation of aspartic acid to α-alanine, 577

Melchior, Jacklyn B., Klioze, Oscar, and **Klotz, Irving M.** Further studies of the synthesis of protein by *Escherichia coli*, 411

Meneghini, M., and **Delwiche, C. C.** The multiplication of tobacco mosaic virus in the host tobacco plant, 177

Moran, John J. See *Bischoff, Yee, Moran, and Katherman*, 729

Mueller, C. Barber, and **Hastings, A. Baird.** Glycolysis and phosphate fractions of red blood cells, 881

— and —. The rate of transfer of phosphorus across the red blood cell membrane, 869

Mueller, Gerald C. See *Handschumacher, Mueller, and Strong*, 335

Mueller, J. Howard. See *Umbarger and Mueller*, 277

N

Nachmansohn, David. See *Korey, de Braganza, and Nachmansohn*, 705

Neal, A. L. See *King, Neal, and Strong*, 307

Nolan, Constance. See *Skipper, Nolan, and Simpson*, 159

Novack, Beatrice G. See *Rosenthal, Rogers, Vars, and Ferguson*, 831

O

O'Kane, D. J. See *Lytle, Zulick, and O'Kane*, 551

Orange, Michael, and **Rhein, Henry C.** Microestimation of magnesium in body fluids. 379

Osler, Abraham G. See *Rice and Osler*, 115

Ottke, Robert C., Tatum, E. L., Zabin, Irving, and **Bloch, Konrad.** Isotopic acetate and isovalerate in the synthesis of ergosterol by *Neurospora*, 429

P

Patterson, E. L. See *Stahmann, Graf, Patterson, Walker, and Watson*, 45

Philip, Julian E., Saunders, A. P., DeRose, A. F., MacCorquodale, D. W., Sylvester, J. C., and **Weston, Arthur W.** Some new biosynthetic penicillins, 479

Popenoe, Edwin A., Jr. See *Doherty and Popenoe*, 447

Powell, Dwight. See *Davis, Henderson, and Powell*, 543

Pricer, W. E., Jr. See *Kornberg and Pricer*, 123

Prins, D. A. See *Ungar, Dorfman, and Prins*, 11

R

Ramasarma, G. B. See *Henderson, Weinstock, and Ramasarma*, 19

Ranson, Stanley L. See *Ajl, Kamen, Ranson, and Wong*, 859

Rapoport, S., and **Luebering, J.** Glycerate-2,3-diphosphatase, 683

Ravdin, Robert G., and **Crandall, Dana I.** The enzymatic conversion of homogentisic acid to 4-fumarylacetoacetic acid, 137

Reinhardt, W. O. See *Bloom, Chaikoff, Reinhardt, and Dauben*, 261

Reio, L. See *Ehrensvärd, Reio, Saluste, and Stjernholm*, 93

Reiser, Raymond, and **Bryson, Melvin J.** Route of absorption of free fatty acids and triglycerides from the intestine, 87

Rhein, Henry C. See *Orange and Rhein*, 379

Rice, F. A. H., and **Osler, Abraham G.** Chromatographic purification and serologic studies of a beef heart lecithin, 115

Richert, Dan A. Studies on the detoxification of 2-methyl-1,4-naphthoquinone in rabbits, 763

Rittenberg, D. See *Clark and Rittenberg*, 521, 529

Rogers, Charles S. See *Rosenthal, Rogers, Vars, and Ferguson*, 831

Rosenthal, Otto, Rogers, Charles S., Vars, Harry M., and **Ferguson, Colin C.** Arginase, adenosinepyrophosphatase, and rhodanese in regenerating rat liver, 831

S

Saluste, E. See *Ehrensvärd, Reio, Saluste, and Stjernholm*, 93

Sandy, Harry R. See *Frost and Sandy*, 249

Sarett, Herbert P. A study of the measurement of 4-pyridoxic acid in urine, 769

Saunders, A. P. See *Philip, Saunders, DeRose, MacCorquodale, Sylvester, and Weston*, 479

Schayer, Richard W. Studies of the metabolism of β-C^{14}-*dl*-adrenalin, 301

Schultz, Alfred S. See *Di Carlo, Schultz, and McManus*, 151

Scott, M. L. See *Hill and Scott*, 651

Shahinian, Sam S. See *Williams, Feigelson, Shahinian, and Elvehjem*, 659

Shaw, Elliott. See *Woolley and Shaw*, 401

Sheffner, A. Leonard. See *Solomon, Johnson, Sheffner, and Bergeim*, 629

Siegel, Irwin, and **Lorber, Victor.** Conversion of C^{14},C^{13}-labeled *n*-valerate to rat liver glycogen, 571

Simpson, Linda. See *Skipper, Nolan, and Simpson*, 159

Singer, Thomas P. See *Englard, Sorof, and Singer*, 217

Sirny, R. J. See *Klungsøyr, Sirny, and Elvehjem*, 557

Skipper, Howard E., Nolan, Constance, and **Simpson, Linda.** Studies on the hazard involved in use of C^{14}. III. Long term retention in bone, 159

Sober, Herbert A. See *Meister, Sober, and Tice,* 577, 591
Solomon, James D., Johnson, Clarence A., Sheffner, A. Leonard, and **Bergeim, Olaf.** The determination of free and total amino acids in rat tissues, 629
Soodak, Morris. See *Cerecedo, Soodak, and Eusebi,* 293
Sorof, Sam. See *Englard, Sorof, and Singer,* 217
Spain, Patricia. See *MacDonald, Ezmirlian, Spain, and McArthur,* 387
Spicer, Virginia L. See *Marrian, Spicer, Balis, and Brown,* 533
Stadie, William C., Haugaard, Niels, and **Marsh, Julian B.** Factors influencing the combination of insulin with muscle from normal rats, 53
—. See *Haugaard, Marsh, and Stadie,* 59
Stahmann, Mark A., Graf, L. H., Patterson, E. L., Walker, J. C., and **Watson, D. W.** The inhibition of tobacco mosaic virus by synthetic lysine polypeptides, 45
Steinberg, Daniel. See *Anfinsen and Steinberg,* 739
Stetten, DeWitt, Jr. See *Topper and Stetten,* 191
Stetten, Marjorie Roloff. Mechanism of the conversion of ornithine into proline and glutamic acid *in vivo,* 499
Stjernholm, R. See *Ehrensvärd, Reio, Saluste, and Stjernholm,* 93
Strecker, Harold J. Formate fixation in pyruvate by *Escherichia coli,* 815
Strong, F. M. See *Handschumacher, Mueller, and Strong,* 335
—. See *King, Neal, and Strong,* 307
—. See *King and Strong,* 315, 325
Sylvester, J. C. See *Philip, Saunders, DeRose, MacCorquodale, Sylvester, and Weston,* 479

T

Tatum, E. L. See *Ottke, Tatum, Zabin, and Bloch,* 429
Teague, R. S., and **Brown, Albert E.** Determination of diethylstilbestrol and its glucuronide in urine, 343
Tice, Sarah V. See *Meister, Sober, and Tice,* 577, 591
Tigerman, Henry, and **MacVicar, Robert.** Glutamine, glutamic acid, ammonia administration, and tissue glutamine, 793
Topper, Yale J., and **Stetten, DeWitt, Jr.** The alkali-catalyzed conversion of glucose into fructose and mannose, 191

U

Umbarger, H. Edwin, and **Magasanik, Boris.** Isoleucine and valine metabolism of *Escherichia coli.* II. The accumulation of keto acids, 287
— and **Mueller, J. Howard.** Isoleucine and valine metabolism of *Escherichia coli.* I. Growth studies on amino acid-deficient mutants, 277
Ungar, Frank, Dorfman, Ralph I., and **Prins, D. A.** Metabolism of *cis*-testosterone, androstanediol-3β,17β, and etiocholanol-17β-one-3 *in vivo,* 11

V

Vars, Harry M. See *Rosenthal, Rogers, Vars, and Ferguson,* 831
Vogel, Henry J. See *Marshak and Vogel,* 597

W

Walker, J. C. See *Stahmann, Graf, Patterson, Walker, and Watson,* 45
Watson, D. W. See *Stahmann, Graf, Patterson, Walker, and Watson,* 45
Weed, Lawrence L., and **Wilson, D. Wright.** The incorporation of C^{14}-orotic acid into nucleic acid pyrimidines *in vitro,* 435
Weinbach, E. C., Lowe, H. J., Frisell, W. R., and **Hellerman, Leslie.** Chemical interferences in cellular metabolism. Cinnamate effects, 779
Weinstock, I. M. See *Henderson, Weinstock, and Ramasarma,* 19
Weston, Arthur W. See *Philip, Saunders, DeRose, MacCorquodale, Sylvester, and Weston,* 479

Williams, J. N., Jr., Feigelson, Philip, Shahinian, Sam S., and Elvehjem, C. A. Further studies on tryptophan-niacin-pyridine nucleotide relationships, 659
—. See *Feigelson, Williams, and Elvehjem*, 361
—. See *Kunkel and Williams*, 755
Wilson, D. Wright. See *Weed and Wilson*, 435
Wong, Donald T. O. See *Ajl, Kamen, Ranson, and Wong*, 859
Wood, John L. See *Gutmann and Wood*, 473
Woolley, D. W., and Shaw, Elliott. Some imidazo-1,2,3-triazines and their biological relationship to the purines, 401

Y

Yee, Yee Sing. See *Bischoff, Yee, Moran, and Katherman*, 729

Z

Zabin, Irving. On the conversion of palmitic acid to stearic acid in animal tissues, 355
—. See *Otke, Tatum, Zabin, and Bloch*, 429
Zerbe, Joan W. See *Rosenthal, Rogers, Vars, and Ferguson*, 831
Zulick, S. M. See *Lytle, Zulick, and O'Kane*, 551

INDEX TO SUBJECTS

A

Acetate: Isotopic, ergosterol synthesis, *Neurospora* use, *Ottke, Tatum, Zabin, and Bloch,* 429
Oxidation, *Escherichia coli*, mechanism, *Ajl and Kamen,* 845
—, *Micrococcus lysodeikticus*, mechanism, *Ajl, Kamen, Ranson, and Wong,* 859

Acetic acid: Metabolism, *Torulopsis utilis, Ehrensvärd, Reio, Saluste, and Stjernholm,* 93
Torulopsis utilis, amino acids and, metabolic relation, *Ehrensvärd, Reio, Saluste, and Stjernholm,* 93

Acetoacetic acid: 4-Fumaryl-. *See* Fumarylacetoacetic acid

Acetylase: Choline. *See* Choline acetylase

Acetyllysine: α-, metabolism, *Clark and Rittenberg,* 529

Adenosinekinase: *Caputto,* 801

Adenosinepyrophosphatase: Liver, regenerating, *Rosenthal, Rogers, Vars, and Ferguson,* 831

Adenylic acid: Enzyme synthesis, *Caputto,* 801

Adrenalin: β-C^{14}-*dl*-, metabolism, *Schayer,* 301

Alanine: α-, aspartic acid decarboxylation, enzymatic, *Meister, Sober, and Tice,* 577

Amino acid(s): -Deficient *Escherichia coli* mutants, growth, *Umbarger and Mueller,* 277
— — — —, growth, keto acids, relation, *Umbarger and Magasanik,* 287
Determination, microbiological, hydrolysis effect, *Klungsøyr, Sirny, and Elvehjem,* 577
Free, tissue, determination, *Solomon, Johnson, Sheffner, and Bergeim,* 629
Resolution, enzymatic, *Doherty and Popenoe,* 447
Sulfur, acetylation, liver and kidney, *Gutmann and Wood,* 473

Amino acid(s)—*continued:*
Torulopsis utilis, acetic acid and, metabolic relation, *Ehrensvärd, Reio, Saluste, and Stjernholm,* 93
Total, tissue, determination, *Solomon, Johnson, Sheffner, and Bergeim,* 629

Ammonia: Tissue glutamine, effect, *Tigerman and MacVicar,* 793

Ammonium: Ions, assimilation, tobacco plants, *Delwiche,* 167

Amylase: β-, crystalline, oxidative inactivation, intramolecular nature, *Englard, Sorof, and Singer,* 217

Androstanediol-3β,17β: Metabolism *in vivo, Ungar, Dorfman, and Prins,* 11

Apoerythein: Saliva, *Beerstecher and Altgelt,* 31

Arginase: Liver, regenerating, *Rosenthal, Rogers, Vars, and Ferguson,* 831

Ascorbic acid oxidase: Nature, *Dunn and Dawson,* 485

Aspartic acid: Decarboxylation to α-alanine, enzymatic, *Meister, Sober, and Tice,* 577
Determination, enzymatic decarboxylation, *Meister, Sober, and Tice,* 591

B

Bacteria: *See also Escherichia, Micrococcus, Xanthomonas*

Bean: Protein, crystalline, phytic acid, combination, *Bourdillon,* 65

Bicarbonate: Brain metabolism, effect, *Birmingham and Elliott,* 73

Blood cell(s): Red, membrane, phosphorus transfer rate, *Mueller and Hastings,* 869
—, nicotinamide mononucleotide synthesis *in vitro, Leder and Handler,* 889
—, phosphate fractions, glycolysis relation, *Mueller and Hastings,* 869

Blood serum: Egg white proteins, *Marshall and Deutsch,* 1

Blood serum—*continued:*
Gentisic acid determination, *Gerald and Kagan*, 467
Steroid hormone esters, enzymatic hydrolysis, *Bischoff, Yee, Moran, and Katherman*, 729
Body fluid(s): Magnesium determination, micro-, *Orange and Rhein*, 379
Bone: Carbon 14 retention, *Skipper, Nolan, and Simpson*, 159
Lead deposition, *MacDonald, Ezmirlian, Spain, and McArthur*, 387
Strontium deposition, *MacDonald, Ezmirlian, Spain, and McArthur*, 387
Brain: Metabolism, bicarbonate effect, *Birmingham and Elliott*, 73
—, hydrogen ion concentration effect, *Birmingham and Elliott*, 73

C

Carbohydrate: Metabolism, retina, C^{14}-O_2 fixation, relation, *Crane and Ball*, 269
Carbon: Mass 14, *Skipper, Nolan, and Simpson*, 159
— —, retention, bone, *Skipper, Nolan, and Simpson*, 159
Carbon dioxide: Carbon 14, fixation, carbohydrate metabolism in retina, relation, *Crane and Ball*, 269
Pyruvate oxidation factor, replacement, *Lytle, Zulick, and O'Kane*, 551
Cartilage: Chondroitin sulfate-S^{35}, isolation, *Dziewiatkowski*, 187
Sulfur 35 deposition, thyroxine and thiouracil effect, *Dziewiatkowski*, 717
Cell(s): Metabolism, cinnamate effect, *Weinbach, Lowe, Frisell, and Hellerman*, 779
See also Cytoplasm, Nucleus
Cholesterol: Radioactive, synthesis *in vitro*, *Brady and Gurin*, 371
Choline acetylase: *Korey, de Braganza, and Nachmansohn*, 705
Esterification and transacetylation, *Korey, de Braganza, and Nachmansohn*, 705
Chondroitin sulfate: Sulfur 35, cartilage, isolation, *Dziewiatkowski*, 187
Chymotrypsin: α-, oxidation product, crystalline, active, *Jansen, Curl, and Balls*, 671
Cinnamate: Cell metabolism, effect, *Weinbach, Lowe, Frisell, and Hellerman*, 779
Coenzyme: A, assay, enzymatic, *Handschumacher, Mueller, and Strong*, 335
—, hippuric acid synthesis, requirement, *Chantrenne*, 227
—, properties, *King and Strong*, 325
Conjugase: Folic acid, cysteine effect, *Hill and Scott*, 651
Cysteine: Folic acid conjugase, effect, *Hill and Scott*, 651
Homo-. *See* Homocysteine
Thioether derivatives, growth, effect, *Armstrong and Lewis*, 461
Cytochrome oxidase: Determination, spectrophotometric, micro-, *Cooperstein and Lazarow*, 665
Cytoplasm: Nucleic acid, purines and pyrimidines, *Marshak*, 607

D

Dehydrogenase: Isocitric. *See* Isocitric dehydrogenase
Diaphragm: Phosphate metabolism, *Haugaard, Marsh, and Stadie*, 59
Diethylstilbestrol: Glucuronide, urine, determination, *Teague and Brown*, 343
Urine, determination, *Teague and Brown*, 343
Diphosphopyridine nucleotide: Isocitric dehydrogenase, yeast, *Kornberg and Pricer*, 123
Reduced, oxidation, peas, *Mathews*, 695
-Requiring enzyme, nicotinamide effect, *Feigelson, Williams, and Elvehjem*, 361
Distribution: Solvent, fractionation procedure, *Kies and Davis*, 637

E

Egg: White, protein, blood serum, *Marshall and Deutsch*, 1

Egg—*continued:*
White, protein, egg yolk, *Marshall and Deutsch*, 1
Yolk, egg white proteins, *Marshall and Deutsch*, 1
Enzyme(s): Adenylic acid synthesis, *Caputto*, 801
Amino acid resolution, *Doherty and Popenoe*, 447
Aspartic acid decarboxylation to α-alanine, use, *Meister, Sober, and Tice*, 577
— — determination, use, *Meister, Sober, and Tice*, 591
Co-. *See* Coenzyme
Coenzyme A assay, use, *Handschumacher, Mueller, and Strong*, 335
Diphosphopyridine nucleotide-requiring, nicotinamide effect, *Feigelson, Williams, and Elvehjem*, 361
Glutamic acid determination, use, *Meister, Sober, and Tice*, 591
Homogentisic acid conversion to 4-fumarylacetoacetic acid, *Ravdin and Crandall*, 137
Liver, system, nicotinamide methylation, *Cantoni*, 203
Steroid hormone esters, blood serum, hydrolysis, *Bischoff, Yee, Moran, and Katherman*, 729
Tissue, fat deficiency, effect, *Kunkel and Williams*, 755
See also Acetylase, Adenosinekinase, etc.
Ergosterol: Synthesis, *Neurospora*, isotopic acetate and isovalerate use, *Ottke, Tatum, Zabin, and Bloch*, 429
Erythein: Apo-. *See* Apoerythein
Erythrocyte(s): *See* Blood cell, red
Escherichia coli: Acetate oxidation, mechanism, *Ajl and Kamen*, 845
Amino acid-deficient mutants, growth, *Umbarger and Mueller*, 277
— — —, —, keto acids, relation, *Umbarger and Magasanik*, 287
Formate fixation in pyruvate, *Strecker*, 815
Isoleucine metabolism, *Umbarger and Mueller*, 277
Umbarger and Magasanik, 287
Escherichia coli—*continued:*
Protein synthesis, effect, *Melchior, Klioze, and Klotz*, 411
Valine metabolism, *Umbarger and Mueller*, 277
Umbarger and Magasanik, 287
Etiocholanol-17β-one-3: Metabolism *in vivo, Ungar, Dorfman, and Prins*, 11

F

Fat(s): Deficiency, tissue enzymes, effect, *Kunkel and Williams*, 755
Fatty acid(s): Free, absorption, intestine, *Reiser and Bryson*, 87
Radioactive, synthesis *in vitro, Brady and Gurin*, 371
Transport, lymphatic, phospholipide rôle, *Bloom, Chaikoff, Reinhardt, and Dauben*, 261
Folic acid: Conjugase, cysteine effect, *Hill and Scott*, 651
Methionine metabolism, effect, *Dinning, Keith, and Day*, 515
Formate: Fixation in pyruvate, *Escherichia coli, Strecker*, 815
Fructose: Glucose conversion to, alkali use, *Topper and Stetten*, 191
Fumarylacetoacetic acid: 4-, homogentisic acid conversion to, enzymatic, *Ravdin and Crandall*, 137

G

Gentisic acid: Blood serum, determination, *Gerald and Kagan*, 467
Gluconokinase: Glucose-6-phosphate oxidation, relation, *Cohen*, 617
Glucose: Fructose and mannose conversion from, alkali use, *Topper and Stetten*, 191
Glucose-6-phosphate: Oxidation, gluconokinase relation, *Cohen*, 617
Glutamic acid: Determination, enzymatic decarboxylation, *Meister, Sober, and Tice*, 591
Ornithine conversion to, *in vivo*, mechanism, *Stetten*, 499
Tissue glutamine, effect, *Tigerman and MacVicar*, 793
Glutamine: Tissue, ammonia administration effect, *Tigerman and MacVicar*, 793

Glutamine—*continued:*
Tissue, glutamic acid administration effect, *Tigerman and MacVicar*, 793
—, glutamine administration effect, *Tigerman and MacVicar*, 793
—,— effect, *Tigerman and MacVicar*, 793
Glycerate-2,3-diphosphatase: *Rapoport and Luebering*, 683
Glyceride(s): Tri-. *See* Triglyceride
Glycogen: Liver, C^{14},C^{13}-labeled *n*-valerate conversion to, *Siegel and Lorber*, 571
Glycolysis: Blood cell, red, phosphate fractions, relation, *Mueller and Hastings*, 881
Growth: Cysteine thioether derivatives, effect, *Armstrong and Lewis*, 461
Homocysteine thioether derivatives, effect, *Armstrong and Lewis*, 461

H

Heart: Lecithin, purification, chromatographic, and serologic studies, *Rice and Osler*, 115
Hexonic acid(s): Keto-. *See* Ketohexonic acid
Hippuric acid: Synthesis, coenzyme A requirement, *Chantrenne*, 227
Homocysteine: Thioether derivatives, growth, effect, *Armstrong and Lewis*, 461
Homogentisic acid: 4-Fumarylacetoacetic acid conversion from, enzymatic, *Ravdin and Crandall*, 137

I

Imidazo-1,2,3-triazine(s): Purines, relationship, *Woolley and Shaw*, 401
Insulin: Muscle, combination, *Stadie, Haugaard, and Marsh*, 53
Intestine: Fatty acids, free, absorption, *Reiser and Bryson*, 87
Triglycerides, absorption, *Reiser and Bryson*, 87
Isocitric dehydrogenase: Diphosphopyridine nucleotide, yeast, *Kornberg and Pricer*, 123
Triphosphopyridine nucleotide, yeast, *Kornberg and Pricer*, 123
Isoleucine: Metabolism, *Escherichia coli*, *Umbarger and Mueller*, 277
Umbarger and Magasanik, 287
Isovalerate: Isotopic, ergosterol synthesis, *Neurospora* use, *Ottke, Tatum, Zabin, and Bloch*, 429

K

Keto acid(s): *Escherichia coli* amino acid-deficient mutants, growth, relation, *Umbarger and Magasanik*, 287
Ketohexonic acid(s): 2-, determination, *Lanning and Cohen*, 109
Kidney: Sulfur amino acids, acetylation, *Gutmann and Wood*, 473
Krebs cycle: Virus propagation, relation, *Ackermann*, 421

L

Lactone: Panto-. *See* Pantolactone
Lead: Bone, deposition, *MacDonald, Ezmirlian, Spain, and McArthur*, 387
Lecithin: Heart, purification, chromatographic, and serologic studies, *Rice and Osler*, 115
Lipide(s): Phospho-. *See* Phospholipide
Liver: Enzyme system, nicotinamide methylation, *Cantoni*, 203
Glycogen, C^{14},C^{13}-labeled *n*-valerate conversion to, *Siegel and Lorber*, 571
Metabolism, anterior pituitary extract, relation, *Campbell and Davidson*, 35
Regenerating, arginase, adenosinepyrophosphatase, and rhodanese, *Rosenthal, Rogers, Vars, and Ferguson*, 831
Sulfur amino acids, acetylation, *Gutmann and Wood*, 473
Lizard(s): Nitrogen excretion, *Khalil*, 443
Lymphatic(s): Fatty acid transport, phospholipide rôle, *Bloom, Chaikoff, Reinhardt, and Dauben*, 261
Lysine: α-Acetyl-. *See* Acetyllysine
α-Hydrogen atom metabolism, *Clark and Rittenberg*, 521

Lysine—*continued:*
Polypeptides, tobacco mosaic virus, effect, *Stahmann, Graf, Patterson, Walker, and Watson,* 45

M

Magnesium: Body fluids, determination, micro-, *Orange and Rhein,* 379
Mannose: Glucose conversion to, alkali use, *Topper and Stetten,* 191
Methionine: Metabolism, folic acid effect, *Dinning, Keith, and Day,* 515
Transmethylation, *Cantoni,* 745
Methyl-1,4-naphthoquinone: 2-, detoxification, *Richert,* 763
Micrococcus lysodeikticus: Acetate oxidation, mechanism, *Ajl, Kamen, Ranson, and Wong,* 859
Microorganism(s): Growth, pantolactone phosphate effect, *King, Neal, and Strong,* 307
Mold: *See also Neurospora*
Mononucleotide: Nicotinamide. *See* Nicotinamide mononucleotide
Mosaic: Tobacco, virus, lysine polypeptides, effect, *Stahmann, Graf, Patterson, Walker, and Watson,* 45
—, —, tobacco plant, multiplication, *Meneghini and Delwiche,* 177
Muscle: Insulin, combination, *Stadie, Haugaard, and Marsh,* 53
See also Diaphragm

N

Naphthoquinone: Methyl-1,4-. *See* Methyl-1,4-naphthoquinone
Neurospora: Ergosterol synthesis, isotopic acetate and isovalerate use, *Ottke, Tatum, Zabin, and Bloch,* 429
Niacin: -Tryptophan relation, *Xanthomonas pruni* metabolism, *Davis, Henderson, and Powell,* 543
-Tryptophan-pyridine nucleotide relationship, *Williams, Feigelson, Shahinian, and Elvehjem,* 659
Nicotinamide: Diphosphopyridine nucleotide-requiring enzymes, effect, *Feigelson, Williams, and Elvehjem,* 361
Methylation, liver enzyme system, *Cantoni,* 203
Nicotinamide mononucleotide: Synthesis, blood cells, red, *in vitro, Leder and Handler,* 889
Nitrate: Ions, assimilation, tobacco plants, *Delwiche,* 167
Nitrogen: Excretion, lizards, *Khalil,* 443
Non-specific, utilization, protein depletion, *Frost and Sandy,* 249
Nucleic acid(s): Cytoplasm, purines and pyrimidines, *Marshak,* 607
Derivatives, assimilation, yeast, *Di Carlo, Schultz, and McManus,* 151
Nucleus, purines and pyrimidines, *Marshak,* 607
Pyrimidines, C^{14}-orotic acid incorporation, *Weed and Wilson,* 435
Related compounds, assimilation, yeast, *Di Carlo, Schultz, and McManus,* 151
Nucleotide: Diphosphopyridine. *See* Diphosphopyridine nucleotide
Pentose. *See* Pentose nucleotide
Pyridine. *See* Pyridine nucleotide
Triphosphopyridine. *See* Triphosphopyridine nucleotide
Nucleus: Nucleic acid, purines and pyrimidines, *Marshak,* 607

O

Ornithine: Proline and glutamic acid conversion from, *in vivo,* mechanism, *Stetten,* 499
Orotic acid: Carbon 14-labeled, nucleic acid pyrimidines, incorporation, *Weed and Wilson,* 435
Ovalbumin: Biosynthesis, *Anfinsen and Steinberg,* 739
Oxidase: Ascorbic acid. *See* Ascorbic acid oxidase
Cytochrome. *See* Cytochrome oxidase

P

Palmitic acid: Stearic acid conversion from, tissue, *Zabin,* 355

Pantolactone: Phosphate, microorganism growth, effect, *King, Neal, and Strong*, 307
—, synthesis, *King, Neal, and Strong*, 307
Pantothenic acid: Diphosphate, synthesis and properties, *King and Strong*, 315
Pea(s): Diphosphopyridine nucleotide, reduced, oxidation, *Mathews*, 695
Penicillin: Biosynthetic, *Philip, Saunders, DeRose, MacCorquodale, Sylvester, and Weston*, 479
Pentose nucleotide(s): Purine ncorporation *in vivo, Marrian, Spicer, Balis, and Brown*, 533
Phosphatase: Adenosinepyro-. *See* Adenosinepyrophosphatase
Glycerate-2,3-di-. *See* Glycerate-2,3-diphosphatase
Phosphate: Blood cell, red, glycolysis, relation, *Mueller and Hastings*, 881
Metabolism, diaphragm, *Haugaard, Marsh, and Stadie*, 59
Phosphatidic acid(s): α-, enantiomeric, synthesis, *Baer*, 235
Phospholipide(s): Fatty acid transport, lymphatic, rôle, *Bloom, Chaikoff, Reinhardt, and Dauben*, 261
Phosphorus: Blood cell, red, membrane, transfer rate, *Mueller and Hastings*, 869
Phytic acid: Bean protein, crystalline, combination, *Bourdillon*, 65
Pituitary: Anterior, extract, liver metabolism, relation, *Campbell and Davidson*, 35
Polypeptide(s): Lysine, tobacco mosaic virus, effect, *Stahmann, Graf, Patterson, Walker, and Watson*, 45
Proline: Ornithine conversion to, *in vivo*, mechanism, *Stetten*, 499
Protein(s): Bean, crystalline, phytic acid, combination, *Bourdillon*, 65
Depletion, nitrogen, non-specific, utilization, *Frost and Sandy*, 249
Egg white, blood serum, *Marshall and Deutsch*, 1
— —, egg yolk, *Marshall and Deutsch*, 1
Protein(s)—*continued:*
Synthesis, *Escherichia coli* effect, *Melchior, Klioze, and Klotz*, 411
Purine(s): Biological materials, determination, micro-, *Marshak and Vogel*, 597
Cytoplasm, nucleic acids, *Marshak*, 607
Imidazo-1,2,3-triazines, relationship, *Woolley and Shaw*, 401
Nucleus, nucleic acids, *Marshak*, 607
Pentose nucleotides, incorporation *in vivo, Marrian, Spicer, Balis, and Brown*, 533
Pyridine nucleotide: -Tryptophan-niacin relationship, *Williams, Feigelson, Shahinian, and Elvehjem*, 659
Pyridoxic acid: 4-, urine, determination, *Sarett*, 769
Pyrimidine(s): Biological materials, determination, micro-, *Marshak and Vogel*, 597
Cytoplasm, nucleic acids, *Marshak*, 607
Nucleic acid, C^{14}-orotic acid incorporation, *Weed and Wilson*, 435
Nucleus, nucleic acids, *Marshak*, 607
Pyruvate: Formate fixation, *Escherichia coli, Strecker*, 815
Oxidation factor, carbon dioxide replacement for, *Lytle, Zulick, and O'Kane*, 551

R

Reptile(s): Excretion, *Khalil*, 443
Retina: Carbohydrate metabolism, C^{14}-O_2 fixation, relation, *Crane and Ball*, 269
Rhodanese: Liver, regenerating, *Rosenthal, Rogers, Vars, and Ferguson*, 831
Rickets: Strontium, radioactive, metabolism, *Jones and Copp*, 509

S

Saliva: Apoerythein, *Beerstecher and Altgelt*, 31
Stearic acid: Palmitic acid conversion to, tissue, *Zabin*, 355

Steroid(s): Hormone esters, blood serum, enzymatic hydrolysis, *Bischoff, Yee, Moran, and Katherman,* 729
Stilbestrol: Diethyl-. *See* Diethylstilbestrol
Strontium: Bone, deposition, *MacDonald, Ezmirlian, Spain, and McArthur,* 387
Radioactive, metabolism, rickets, *Jones and Copp,* 509
Sulfur: Amino acids, acetylation, liver and kidney, *Gutmann and Wood,* 473

T

Testosterone: *cis-*, metabolism *in vivo, Ungar, Dorfman, and Prins,* 11
Thiamine: Analogues, *Cerecedo, Soodak, and Eusebi,* 293
—, studies *in vivo, Cerecedo, Soodak, and Eusebi,* 293
Thiouracil: Cartilage, S^{35} deposition, *Dziewiatkowski,* 717
Thyroxine: Cartilage, S^{35} deposition, *Dziewiatkowski,* 717
Tobacco: Mosaic virus, lysine polypeptides, effect, *Stahmann, Graf, Patterson, Walker, and Watson,* 45
— —, tobacco plant, multiplication, *Meneghini and Delwiche,* 177
Plant, ammonium and nitrate ions, assimilation, *Delwiche,* 167
Torulopsis utilis: Acetic acid and amino acids, metabolic relation, *Ehrensvärd, Reio, Saluste, and Stjernholm,* 93
— — metabolism, *Ehrensvärd, Reio, Saluste, and Stjernholm,* 93
Transmethylation: Methionine, *Cantoni,* 745
Triazine(s): Imidazo-1,2,3-. *See* Imidazo-1,2,3-triazines
Triglyceride(s): Absorption, intestine, *Reiser and Bryson,* 87
Triphosphopyridine nucleotide: Isocitric dehydrogenase, yeast, *Kornberg and Pricer,* 123
Trypsin: Chymo-. *See* Chymotrypsin
Tryptophan: Metabolism, vitamin B deficiency, effect, *Henderson, Weinstock, and Ramasarma,* 19
Tryptophan—*continued:*
Niacin-, relation, *Xanthomonas pruni* metabolism, *Davis, Henderson, and Powell,* 543
-Niacin-pyridine nucleotide relationship, *Williams, Feigelson, Shahinian, and Elvehjem,* 659

U

Uracil: Thio-. *See* Thiouracil
Urine: Diethylstilbestrol and glucuronide, determination, *Teague and Brown,* 343
4-Pyridoxic acid, determination, *Sarett,* 769

V

Valerate: Iso-. *See* Isovalerate
n-, C^{14},C^{13}-labeled, liver glycogen conversion from, *Siegel and Lorber,* 571
Valine: Metabolism, *Escherichia coli, Umbarger and Mueller,* 277
Umbarger and Magasanik, 287
Virus: Propagation, Krebs cycle, relation, *Ackermann,* 421
Tobacco mosaic, lysine polypeptides, effect, *Stahmann, Graf, Patterson, Walker, and Watson,* 45
— —, tobacco plant, multiplication, *Meneghini and Delwiche,* 177
Vitamin(s): B deficiency, tryptophan metabolism, effect, *Henderson, Weinstock, and Ramasarma,* 19

X

Xanthomonas pruni: Metabolism, niacin-tryptophan relation, *Davis, Henderson, and Powell,* 543

Y

Yeast: Diphosphopyridine nucleotide isocitric dehydrogenase, *Kornberg and Pricer,* 123
Nucleic acid derivatives and related compounds, assimilation, *Di Carlo, Schultz, and McManus,* 151
Triphosphopyridine nucleotide isocitric dehydrogenase, *Kornberg and Pricer,* 123
See also Torulopsis
